## **DETAILED ACTION**

### ***Response to Arguments***

1. The applicant's argument that Fujimoto et al. (Application No. 10/534,283) failed to teach the limitation of an electrolytic capacitor comprising an anode foil has substantially the same width as the separator to make capacitance greater than a capacitor in which the anode foil has smaller width than that of the separator to prevent contact with the cathode, and the cathode foil has a smaller width than that of the anode foil for both foils to prevent contact each other while maintaining capacitance unchanged. The examiner finds this argument persuasive. Therefore, the examiner made decision to allow this limitation over the prior art of record.

### ***Allowable Subject Matter***

2. Claims 1-3 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-3, the prior art alone or in combination does not teach the limitation of an electrolytic capacitor comprising an anode foil has substantially the same width as the separator to make capacitance greater than a capacitor in which the anode foil has smaller width than that of the separator to prevent contact with the cathode, and the cathode foil has a smaller width than that of the anode foil for both foils to prevent contact each other while maintaining capacitance unchanged.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **Citation Relevant of Prior Art**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. Shiue et al. (US 6,579,327) disclose cylindrical high voltage supercapacitor and method of manufacturing the same.
- b. Shin et al. (US 6,454,817) disclose method for manufacturing solid electrolytic capacitor using functional polymer electrolytic composition.
- c. Akami et al. (US 6,375,688) disclose method of making solid electrolyte capacitor having high capacitance.
- d. Inoue et al. (US 6,052,273) disclose solid electrolyte capacitor.
- e. Callins et al. (US 3,789,502) disclose fused cathode electrolytic capacitors and method of making the same.

### **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nguyen T. Ha whose telephone number is 571-272-1974. The examiner can normally be reached on Monday-Friday from 8:30AM to 6:00PM.
